

Zscaler and Okta Solution Brief

More and more users are embracing the use of cloud-based applications. In fact, there has been an exponential rise in the number and usage of cloud based applications in the Enterprise.

SOLUTION OVERVIEW

Zscaler and Okta have partnered to deliver seamless authentication and security for enterprises using cloud-based applications. By combining Zscaler's Security Cloud with Okta's identity and access management service, enterprises can apply corporate policy to every employee, regardless of where they are or what device they are using. The Okta Directory Integration Edition for Zscaler offers a complete, reliable, and easy-to-use AD integration with Zscaler that provides a seamless authentication experience for end-users.

- Many companies use Federated Identity systems like SAML to authenticate users only once with an identity provider and then access multiple cloud services without additional authentication.
- Zscaler supports SAML and fully integrates with these Federated Identity Systems.

The end result is users can log into Zscaler with their AD credentials and the AD Group membership is automatically synchronized to Zscaler. No password is stored in Zscaler or Okta – the AD server remains the single source of authentication – users do not need to remember yet another password or reset their Zscaler password because their AD password is now their Zscaler password.

Together, Zscaler and Okta provide a seamless, secure and highly usable integrated solution for Enterprises to safely enable cloud based applications and the use of mobile devices.

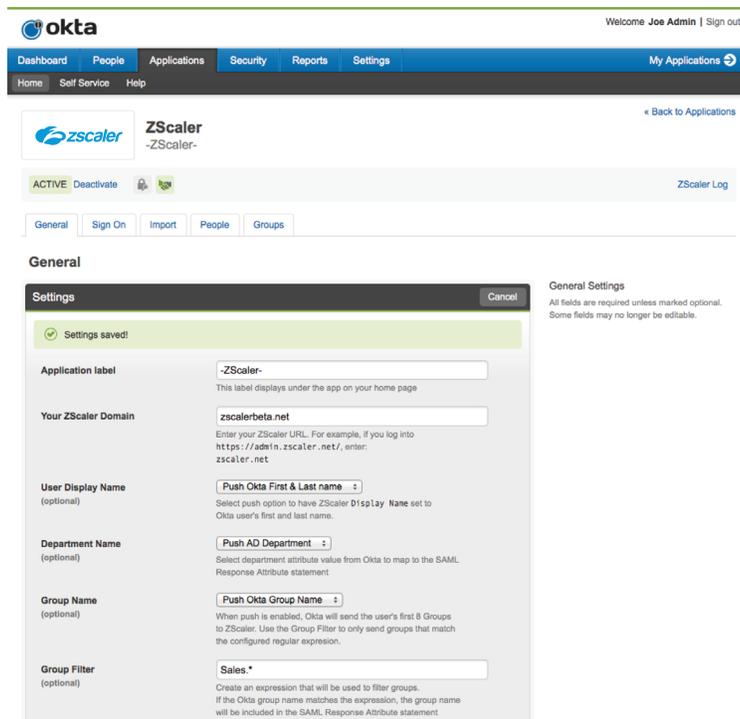

HIGHLIGHTS

- Rapid provisioning of user-based security and authentication to safely enable cloud based applications
- Seamless integration with Federated Identity solution using SAML
- Users login to Zscaler with their AD credentials. AD Group membership is automatically synchronized

Integrating SD with Zscaler

Zscaler User Management in Okta

About Zscaler

Zscaler is revolutionizing Internet security with the industry’s first security-as-a-service platform, used by more than 5,000 leading organizations, including 50 of the Fortune 500. Zscaler is a Gartner Magic Quadrant leader for Secure Web Gateways and delivers a safe and productive Internet experience for every user, from any device, and from any location – 100% in the cloud. Zscaler delivers unified, carrier-grade Internet security, next-generation firewall, web security, sandboxing/advanced persistent threat (APT) protection, data loss prevention, SSL inspection, traffic shaping, policy management, and threat intelligence – all without the need for on-premises hardware, appliances, or software.
