

Health360 At-A-Glance

AT-A-GLANCE

Solution Benefits:

ONE VIEW OF DEPLOYMENT HEALTH:

Health360 unifies telemetry signals from across Zscaler's platform to provide a comprehensive view into deployment health.

PROACTIVE HEALTH MONITORING:

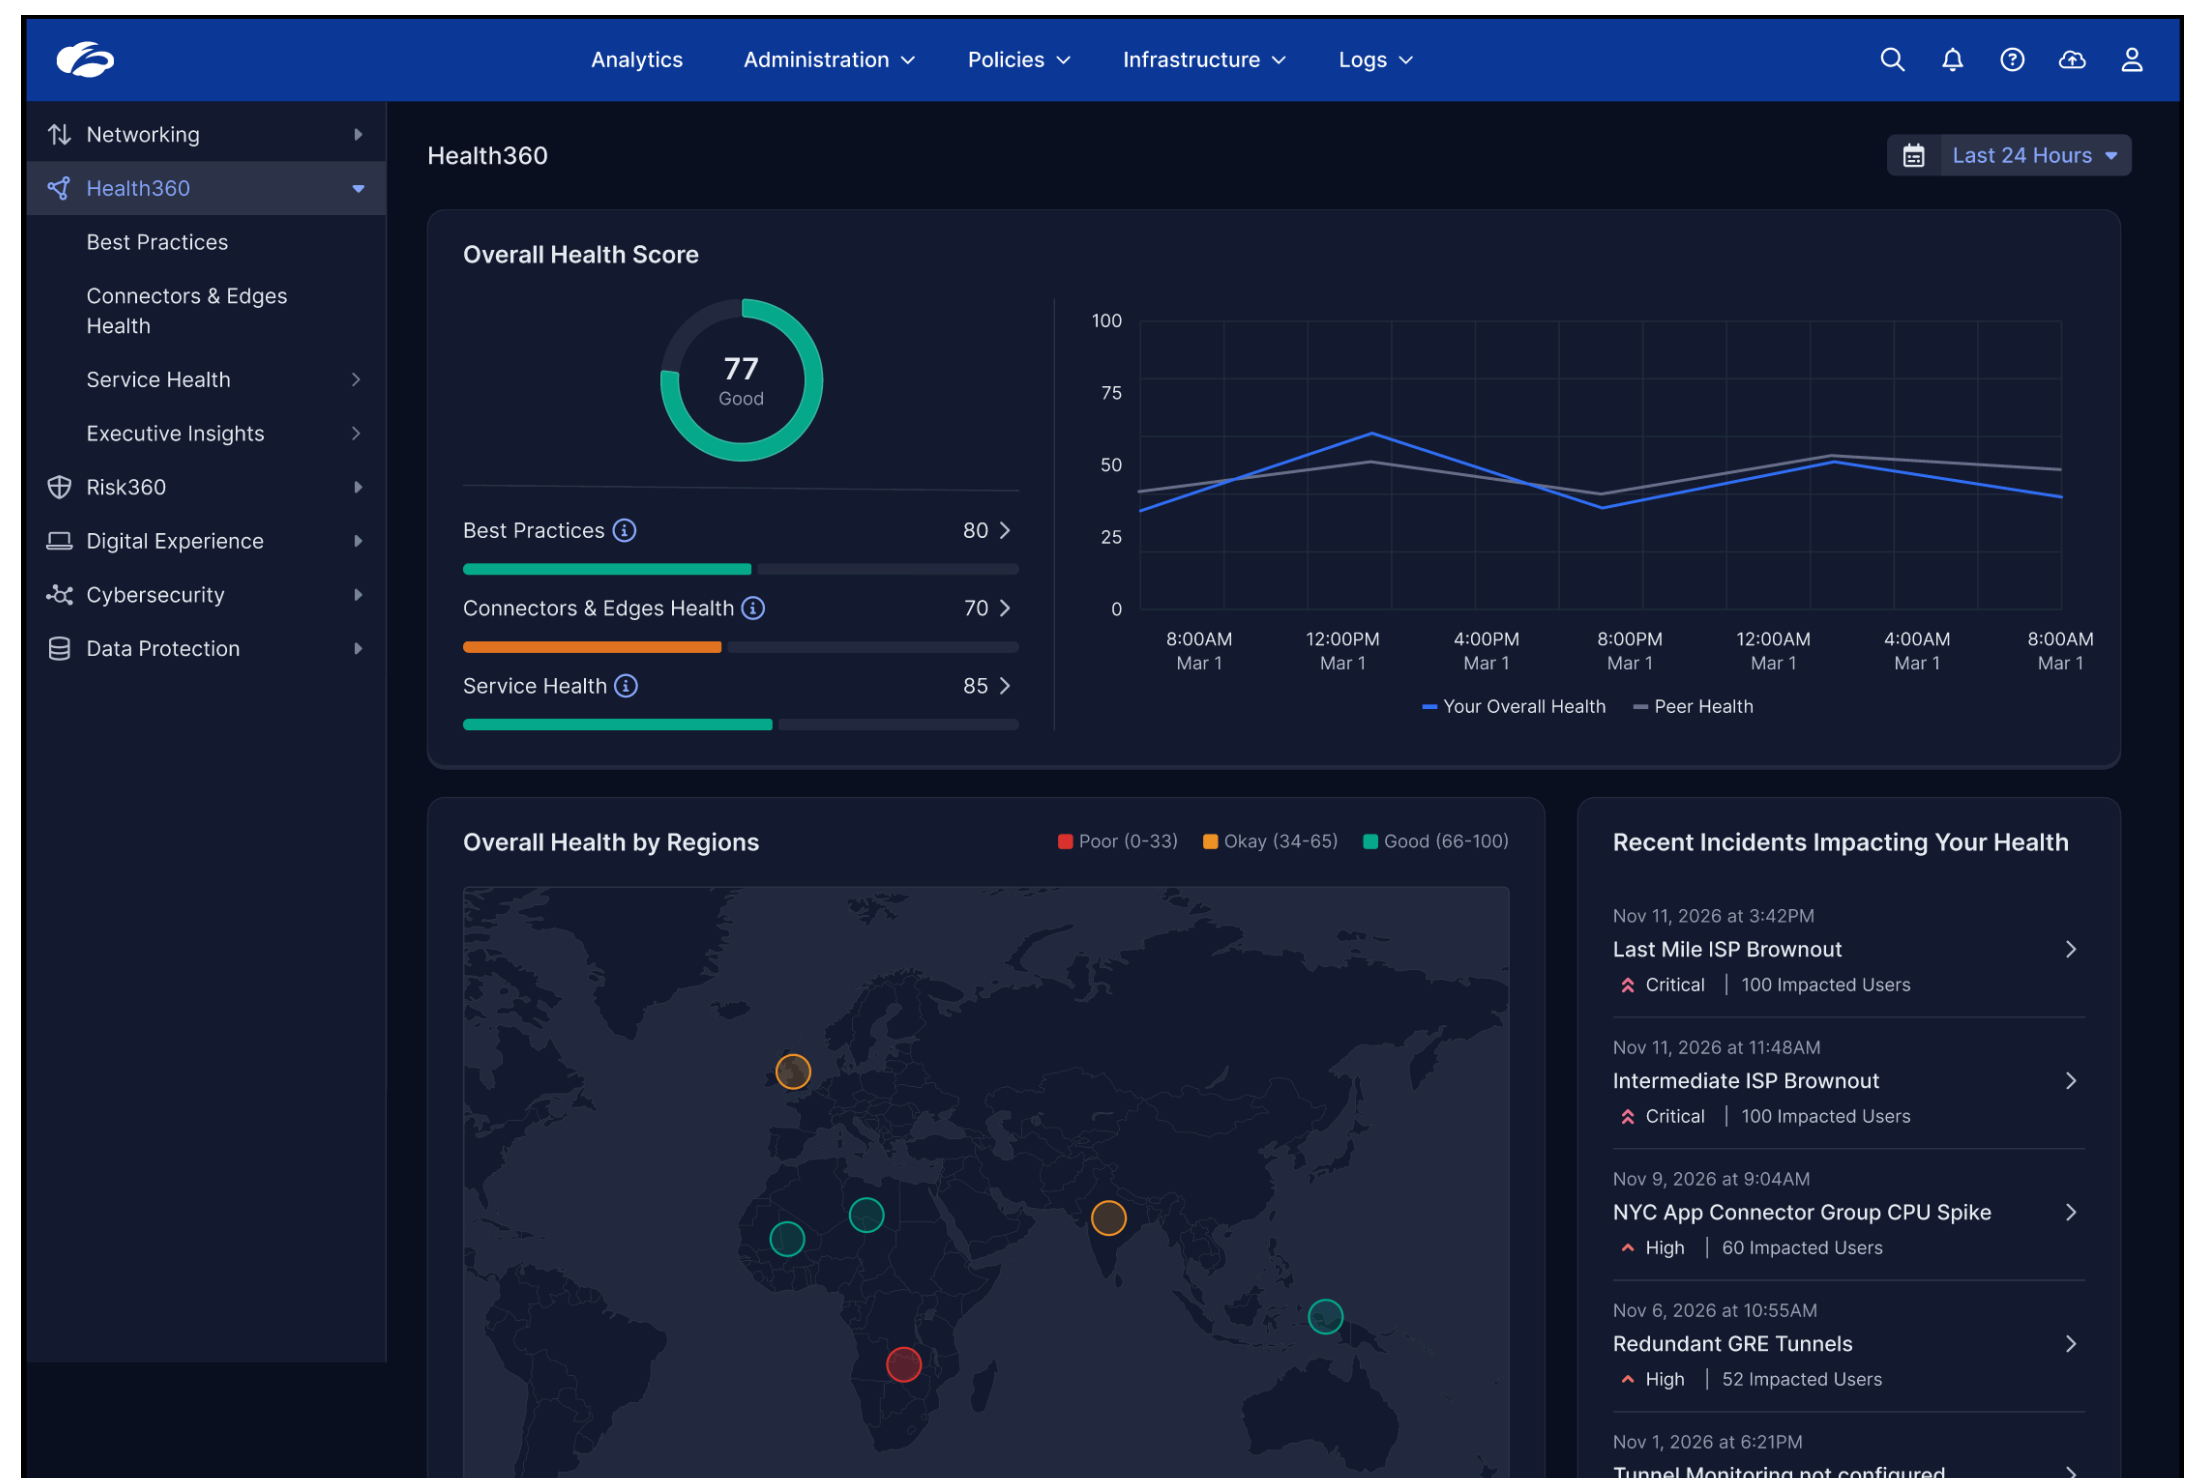

Near-real-time monitoring enables proactive maintenance to keep deployments healthy and prevent performance issues.

THE RIGHT METRICS AND REPORTS:

Health scores offer clarity at a glance, and executive dashboards offer extra insights on health, adoption maturity, and ROI.

Today's security platforms typically span a variety of products, interfaces, and infrastructure. As a result, service owners face three key challenges when it comes to the health of their deployments. First, fragmented health indicators across scattered dashboards and reports make it difficult to get a unified view of deployment performance, resilience, and maturity. Next, that disjointed visibility means that practitioners often discover issues reactively—after users complain about their digital experiences and after productivity is impaired. Finally, service owners have to spend exorbitant amounts of time pulling metrics and building reports for executives who need to understand platform performance, implementation progress, and return on investment (ROI).

Fortunately, the Zscaler Zero Trust Exchange, the AI security platform built on zero trust, is uniquely positioned to address these challenges because of Health360.

Health360

Health360 is a free solution included as part of the Zero Trust Exchange platform that gives Zscaler customers a comprehensive, objective view of their deployment health. By unifying telemetry from ZIA, ZPA, ZDX, and other Zscaler solutions and services, it provides a single, overarching health score, as well as granular, drill-down details for every aspect of that health score. In other words, it replaces piece-meal approaches with consolidation and simplicity.

This is possible because Health360 is part of the Zero Trust Exchange platform, which all Zscaler products share and through which all customer traffic flows. By tapping into 500 trillion daily telemetry signals (already pooled and normalized), Health360 gains a unique view into the platform, its components, and customer traffic—something that perimeter-based vendors and standalone observability tools cannot replicate.

Health360 organizes its comprehensive intelligence into three core pillars, which all receive their own health scores.

By quantifying findings across these three dimensions and providing an overarching score in near-real-time, Health360 gives organizations a comprehensive view into their deployment health, helps them identify and respond to issues proactively, and simplifies reporting so that executives and service owners can better understand platform performance, zero trust maturity, and ROI.

If you want to maximize your Zscaler deployment health with Health360, ask your account team about this free solution.

About Zscaler

Zscaler (NASDAQ: ZS) accelerates digital transformation so customers can be more agile, efficient, resilient, and secure. The Zscaler Zero Trust Exchange™ platform protects thousands of customers from cyberattacks and data loss by securely connecting users, devices, and applications in any location. Distributed across more than 150 data centers globally, the SSE-based Zero Trust Exchange™ is the world's largest in-line cloud security platform.
