

Is your organisation ready for modern data compliance?

Find out with our 5-point checklist

Regulatory demands are increasing, security incidents are accelerating, and the cost of non-compliance has never been higher. Yet many organisations are still using fragmented tools, manual workflows and reactive controls. Check to see if your organisation is ready for continuous, proactive compliance.

01

Do you know where all your sensitive data lives?

Knowing what data you hold, where it sits and how it's being used is fundamental, yet challenging.

- Automatically classify data across all locations: cloud, AI, devices and on-premises
- Separate regulated from everyday data so the right protections stay with the right information
- Keep discovery and classification running constantly, not just during audits

02

Can you safely support GenAI and modern workflows?

AI can unlock value — but only if it's used securely.

- Spot when sensitive data is being shared with AI systems and take action
- Allow AI tools securely, instead of blocking them outright
- Use flexible controls that can adapt as new AI tools and workflows emerge

03

Are your controls consistent everywhere your data is used?

Your data should stay secure, wherever it's accessed.

- Make sure policies travel with the data across apps, devices, users and locations
- Use one unified DLP control across SaaS, private apps and cloud workloads
- Protect both structured and unstructured data, from files to databases

04

Can you prove compliance whenever you need to?

You shouldn't have to scramble for evidence once a year.

- Produce compliance proof instantly, whenever it's requested
- Automate reporting to remove manual work and the risk of mistakes
- Monitor compliance continuously so you can catch and fix issues early

05

Are your security and compliance teams spending time wisely?

Your teams should focus on high-value work, not admin tasks.

- Update policies in one place, ensuring consistent enforcement everywhere
- Reduce alert noise so teams can concentrate on the most important risks
- Automate triage and audit preparation to save time and reduce effort

Achieve proactive compliance with Zscaler

If you struggle with data visibility, rely on manual processes or apply protections inconsistently, your current approach won't keep pace with today's demands. By automating key tasks, centralising policy and applying consistent controls everywhere, you can reduce risk and build a stronger, more proactive compliance posture.

To find out how we can help your business achieve modern data compliance, get in touch.
