The VPN is down again…
When will it be done?
I'm meeting with a customer in 5-mins
I know, I'm working on it.

Many ZTNAs are delivered as a cloud service. Allowing scale to any number of remote users, maximizing both security and productivity.

“In 2022, 42.5% of the global workforce will be mobile”¹ and that number’s growing.

VPN licenses are tied to appliances. Forcing IT to worry about exceeding capacity limits and the subsequent loss of remote user productivity.

“The average enterprise DDoS attack costs $2.5 million”³

When's the last time someone said they liked VPN? The way we work has changed. We access apps from any device, from anywhere, and we expect a fast, seamless experience when we do so. Now, enterprises are able to deliver this, and improve security with cloud services called Zero Trust Network Access (ZTNA) technologies. A modern alternative to VPN.

With ZTNA, admin ticket volume is down, hapless users, and stressless.

Gartner predicts that “By 2023, 60% of enterprises will phase out most of their remote access VPNs in favor of ZTNA.”⁵

See how they compare
Life with VPN
User traffic is backhauled to the data center, causing delays, impacting productivity.

Life with ZTNA
ZTNA provides fast access, improving experience and boosting productivity.

Are we still using VPN? I haven't had issues in weeks.
We switched to Zscaler’s ZTNA solution instead.
Glad you’re loving the user experience.
