Digital transformation is a key business enabler—with some unique challenges. Recently, CXOs and VPs revealed where they are now and how they're looking ahead.

65% agree that more sensitive data is located outside of the enterprise data center than inside enterprise infrastructure.

68% strongly agree that more applications are consumed from SaaS than consumed from enterprise infrastructure.

82% of organizations will evaluate or adopt cloud-delivered security in the near future.

The cloud is where it’s at. Organizations expect to realize a number of benefits by replacing legacy architectures with cloud-delivered zero trust, including:

- Reduced IT costs: 49%
- Reduced risk: 41%
- Improved visibility: 40%

Security needs to step up, way up. To protect against modern threats, perimeter-based security architectures cannot deliver the flexibility needed in the foreseeable future.

A cloud-delivered zero trust approach reduces risk and helps deliver the desired benefits of digital transformation.

Discover security that transforms. Thousands of global organizations trust Zscaler to enable digital transformation with a zero trust approach that delivers fast, seamless, and secure access across the entire business ecosystem. Let us help kickstart your transformation journey.
