

# Zscaler and ArcSight Solution Brief

## SOLUTION OVERVIEW

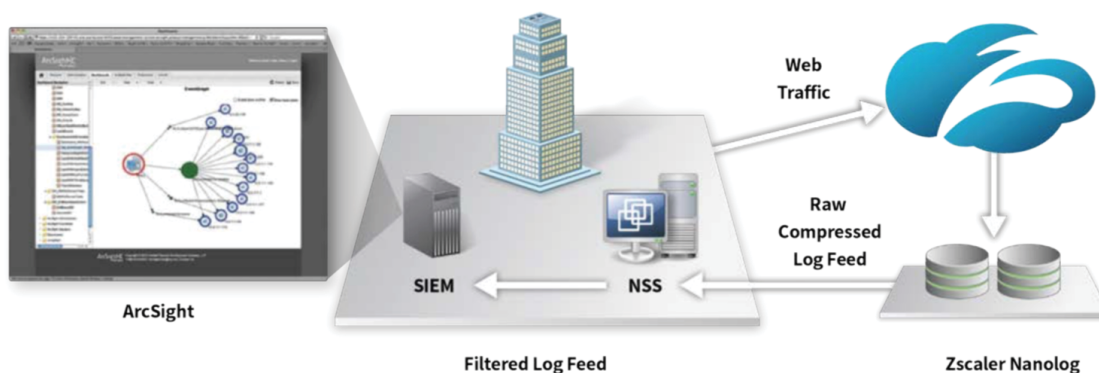

Zscaler and HP ArcSight have partnered to deliver deeper data analysis, visibility and digital forensics.

Organizations seek to correlate log data across multiple devices to effectively analyze its traffic patterns across its network to identify anomalies and security vulnerabilities. Organizations may also face compliance or operational requirements to store data on-premise for future audit and analysis. Zscaler complements the deep analysis capabilities of ArcSight SIEM solution by providing a comprehensive view into user activity. Utilizing the HP ArcSight Flexconnector and Common Event Format (CEF)

Zscaler Nanolog Streaming service (NSS) provides real-time and comprehensive log data. Utilizing the HP ArcSight Flexconnector and Common Event Format (CEF), Zscaler's NSS adds deeper data analysis encompassing all users, across all devices and location into ArcSight Enterprise Security Manager (ESM) Platform.

### HIGHLIGHTS

- Seamless integration with customers existing HP ArcSight SIEM infrastructure.
- A single architecture for analyzing log, flow, vulnerability, user and asset data.
- Full visibility into network, application and user activity, across all locations and devices.

HP ArcSight ESM helps safeguard your business by giving you complete visibility into activity across the IT infrastructure from:

- External threats such as malware and hackers
- Internal threats such as data breaches and fraud
- Compliance pressures from failed audits.

This integration allows HP ArcSight to correlate relevant user specific data into other relevant data feeds that it is collecting, into a single view, combining user, application and security threat anomalies.

### About Zscaler

Zscaler is revolutionizing Internet security with the industry's first security-as-a-service platform, used by more than 5,000 leading organizations, including 50 of the Fortune 500. Zscaler is a Gartner Magic Quadrant leader for Secure Web Gateways and delivers a safe and productive Internet experience for every user, from any device, and from any location — 100% in the cloud. Zscaler delivers unified, carrier-grade Internet security, next-generation firewall, web security, sandboxing/advanced persistent threat (APT) protection, data loss prevention, SSL inspection, traffic shaping, policy management, and threat intelligence — all without the need for on-premises hardware, appliances, or software.
