

Zscaler was founded on a vision that the internet would become the new corporate network as the cloud became the new data center. We predicted that, with rapid cloud adoption and increasing workforce mobility, traditional perimeter security approaches would provide inadequate protection for users and data, as well as an increasingly poor user experience. We pioneered a security cloud that represents a fundamental shift in the architectural design and approach to network security.

Our security cloud, which is distributed across more than 150 data centers around the world, helps organization accelerate their IT transformation to the cloud. Our customers benefit from the network effect of our growing cloud because once a new threat is detected, it can be blocked for user across our entire customer base with minutes.

Company Mission

Zscaler's mission is to empower organizations to realize the full potential of the cloud and mobility by securely connecting users to applications from any device, anywhere.

Key Products

Zscaler Internet Access: Delivers your security stack as a service from the cloud, eliminating the cost and complexity of traditional secure web gateway approaches.

Zscaler Private Access: Ensures that only authorized users have access to specific private applications by creating secure segments of one between individual devices and apps.
